IMPROVE BIOMARKER DISCOVERY WORKFLOW WITH LASER MICRODISSECTION AND AIVIA

HANDS-ON DEMONSTRATIONS

Laser Microdissection Microscopy with the LMD7 and AI-powered Image Analysis

Learn how Leica's Laser Microdissection system will enable you to isolate specific single cells or entire areas of tissue. We move the laser, not the sample, and we use gravity for collection. That is why our LMD systems provide you with perfectly cut, contamination-free, analysis-ready disseccates. With our AI-powered image analysis software, Aivia, you can gain better insights about your sample.
